

ABSTRACT

A Phase I historic resources survey was conducted for the proposed Route 9 and Road 319 Intersection Improvements Project. The purpose of this survey was to identify all buildings and structures, fifty years in age or older, situated within the Area of Potential Effect (APE) for the project. Previous studies conducted within the APE resulted in the identification of one (1) property (S-3156). Recent fieldwork resulted in the identification of seven (7) additional resources within the APE meeting the fifty-year requirement for historic evaluation (S-10124 – S-10130). The National Register Criteria for Evaluation were then applied to all eight (8) resources. Preliminary recommendations regarding National Register eligibility are contained within this report.

This report includes Delaware Cultural Resource Survey forms for one (1) previously and seven (7) recently surveyed properties.
